Microbiological air sampling in clean rooms and other controlled environments usually requires the sampling of large volumes of air (at least 1 m³). It is also very important that samples are representative and the results of sampling accurate enough to ensure that the air meets regulatory standards, or guidelines.

Air Samplers for Microbiological Monitoring of Air Quality

What is Air Sampling? What is air sampling? Put simply, air sampling is capturing the contaminant from a known volume of air, measuring the amount of contaminant captured, and expressing it as a concentration. This means that an air sample requires three basic measurements: 1. The flow rate of air through the collection medium 2. The sample run ...
