Overdenture is any removable dental prosthesis that covers and rests on one or more remaining natural teeth, the roots of natural teeth, and/or dental implants. It is one of the most practical measures used in preventive dentistry. Overdentures can be either tooth supported (conventional / immediate) or implant supported.

Overdenture - Wikipedia

The awareness and demand for quality of dental treatment is relatively increasing in recent generation. Various options available for the replacement of partially missing teeth are over dentures, clasp retained removable partial dentures, removable partial dentures with precision attachments and implants.

Figure 6 from Precision attachments- An overview ...

Lower Precision Attachment Case with 3 Implants: The worst restoration in dentistry is the lower denture. With only three implants, this patient has a fixed bridge in the front that enables her to bite into anything. The precision attachment partial denture is worn 24 hours a day and only removed for hygiene. This case was completed in 1993.
