Sign language linguists show here that all questions relevant to the linguistic investigation of spoken languages can be asked about sign languages. Conversely, questions that sign language linguists consider - even if spoken language researchers have not asked them yet - should also be asked of spoken languages. The HSK handbook Sign Language aims to provide a concise and comprehensive overview of the state of the art in sign language linguistics. It includes 44 chapters, written by leading researchers in the field, that address issues in language typology, sign language grammar, psycholinguistics, neurolinguistics, sociolinguistics, and language documentation and transcription. Crucially, all topics are presented in a way that makes them accessible to linguists who are not familiar with sign language linguistics.

The 1998 edition of Education at a Glance provides comparable information on the human and financial resources invested in education, on how education and learning systems operate and evolve, and on the returns to educational investments.

Trends and Prospects in Metacognition presents a collection of chapters dealing principally with independent areas of empirical Metacognition research. These research foci, such as animal metacognition, neuropsychology of metacognition, implicit learning, metacognitive experiences, metamemory, young children's Metacognition, theory of mind, metacognitive knowledge, decision making, and interventions for the enhancement of metacognition, have all emerged as trends in the field of metacognition. Yet, the resulting research has not converged, precluding an integration of concepts and findings. Presenting a new theoretical framework, Trends and Prospects in Metacognition extends the classical definitions offered by Flavell and Nelson to carry the prospect of more integrated work into the future. By opening the possibility to cross the boundaries posed by traditionally independent research areas, this volume provides a foundation for the integration of research paradigms and concepts and builds on the relationship between metacognition and consciousness, while integrating basic with applied research.

Mediaeval Manichaean Book Art focuses on a corpus of 89 fragments of exquisitely illuminated manuscripts that were produced under the patronage of the Turkic-speaking Uygurs in the Turfan region of East Central Asia between the 8th and 11th centuries C.E., and used in service of the local Manichaean church. By applying a codicological approach to the analysis of these sources, this study casts light onto a lost episode of Central Asian art history and religious book culture. Mediaeval Manichaean Book Art represents a pioneer study in its subject, research methodology, and illustrations. It extracts codicological and art historical data from torn remains of lavishly decorated Middle-Persian, Sogdian, and Uygur language manuscripts in codex, scroll, and 'palm-leaf' formats. Through detailed analyses and carefully argued interpretations aided by precise computer drawings, the author introduces an important group of primary sources for future comparative research in Central Asian art, mediaeval book illumination, and Manichaean studies.
