This comprehensive handbook provides an overview and update of the issues, theories, processes, and applications of the social science of population studies. The volume's 30 chapters cover the full range of conceptual, empirical, disciplinary, and applied approaches to the study of demographic phenomena. This book is the first effort to assess the entire field since Hauser and Duncan's 1959 classic, *The Study of Population*. The chapter authors are among the leading contributors to demographic scholarship over the past four decades. They represent a variety of disciplines and theoretical perspectives as well as interests in both basic and applied research.

This book covers the proceedings of a major 2006 symposium on macropods that brought together the many recent advances in the biology of this diverse group of marsupials, including research on some of the much neglected macropods such as the antilopine wallaroo, the swamp wallaby and tree-kangaroos. More than 80 authors have contributed 32 chapters, which are grouped into four themes: genetics, reproduction and development; morphology and physiology; ecology; and management. The book examines such topics as embryonic development, immune function, molar progression and mesial drift, locomotory energetics, non-shivering thermogenesis, mycophagy, habitat preferences, population dynamics, juvenile mortality in drought, harvesting, overabundant species, road-kills, fertility control, threatened species, cross-fostering, translocation and reintroduction. It also highlights the application of new techniques, from genomics to GIS. *Macropods* is an important reference for academics and students, researchers in molecular and ecological sciences, wildlife and park managers, and naturalists.

The author offers a look at depression in which he draws on his own battle with the illness and interviews with fellow sufferers, researchers, doctors, and others to assess the complexities of the disease, its causes and symptoms, and available therapies.

This 1996 book uses a local study to explore some of the more significant societal changes of the modern western world.

This text provides students with the information needed to properly assess childhood language disorders and decide appropriate treatments. The book covers language development from birth to adolescence.

This book is a simple introduction to the logic behind analyses and sampling design for mark-recapture and survey efforts. With a focus on the early user and beginner, the book explains the complicated formulas and statistics that can be effectively used around the world in support of conservation efforts.

Fundamentals of Social Work Research is a briefer, but thoroughly re-worked version of the Engel and Schutt's The Practice of Research in Social Work 2e which will provide an engaging text for introductory social work research classes. The Practice of Research in Social Work introduced research methods as an integrated set of techniques to investigate social work practice methods and problems. The brief edition will continue to integrate substantive practice-related examples with research techniques, present ethical decision making as a part of every aspect of the research design process, and infuse content on diversity and populations at risk throughout the text. The format is appropriate for courses in social work research methods which are one quarter or one semester in length.

Charles Fox and Jason Wolf have brought together leading researchers to produce a cutting-edge primer introducing readers to the major concepts in modern evolutionary genetics. This book spans the continuum of scale, from studies of DNA sequence evolution through proteins and development to multivariate phenotypic evolution, and the continuum of time, from ancient events that lead to current species diversity to the rapid evolution seen over relatively short time scales in experimental evolution studies. Chapters are accessible to an audience lacking extensive background in evolutionary genetics but also current and in-depth enough to be of value to established researchers in evolution biology.
