Finance is a notoriously difficult core subject for business undergraduates, which many find difficult to understand. The area has been dominated by large and complex introductory texts - often from the US - which many lecturers find too detailed and unwieldy. This carefully developed and researched text will fill this gap by providing a succinct, modular, UK-focused introduction to the subject of financial management. Quality controlled by an academic review panel, the content and approach has been rigorously developed to answer the needs of non-finance students. The user-friendly features and design will be of great appeal to the many undergraduates who find finance a difficult subject. Examples, models, formulas, and exercises are lucidly and clearly presented, supported by strong pedagogical features - learning objectives, worked examples, key learning points, further reading, practical assignments, references, case studies and teacher's guide. This ensures that Financial Management will prove the most accessible text for business and finance students.

This book, first published in 1988, analyses the history of auditing with as much objectivity as possible. These chapters reveal the importance of auditing in society generally and business activity particularly. The character of the auditor is examined, and their part in history as their role developed from an amateur status to a professional one. The development of the accounting profession is a significant part of the history of auditing. The emerging professional bodies assumed a societal role and by doing so, the audit function changed in terms of its aims and practices, and became a matter of public as well as private concern.
