Slow Burn tells how the superbike racing motorcycle developed out of the road-going sports-tourer to become one of the most successful competitions in all forms of motorcycle sport. As well as offering world championship class competition in its own right, superbike racing has been a highly competitive training ground for grand prix riders as well as helping manufacturers, distributors and dealers develop and improve their motorcycles. Superbike racing is to the motorcycle industry what touring car or NASCAR competition is to the car world – race on Sunday, sell on Monday. All the big names were drawn into the sport during its formative years and have been there ever since – Honda, Kawasaki, Suzuki, Yamaha, Ducati and Aprilia have all used superbike racing to test their street bike designs. And some of the biggest riders in the sport – Wayne Gardner, Wayne Rainey, Kevin Schwantz and Eddie Lawson – all started out on big, unruly superbikes, learning how to power slide their way around the world ' s toughest tracks. It ' s all in superbike – and it ' s all in Slow Burn.

An illustrated guide to the history of motorcycle design that profiles bikes from around the world, describes technical and stylistic innovations, and includes photographs.

Popular Mechanics inspires, instructs and influences readers to help them master the modern world. Whether it ' s practical DIY home-improvement tips, gadgets and digital technology, information on the newest cars or the latest breakthroughs in science

Excerpt: The Honda VFR750F is a sport touring motorcycle produced by Honda from 1986 to 1997. The fully faired motorcycle had a 98 horsepower (73 kW) liquid-cooled double overhead cam (DOHC) V4 four-stroke engine. All generations of VFR750 since 1990 employ an ELF-designed single-sided rear swingarm. Also characteristic of the VFR750 (until the 2002 VFR800) was durable gear-driven cams. The original VFR750F was first introduced to journalists after the 1985 Bol d'Or, and launched at Jerez. Introduced for 1986 as a complete redesign of the VF700/750F models in order to address some of the camshaft and bearing problems that had become associated with the first-generation Honda V4 engines, and to improve Honda's negative image concerning this engine. Compared to the VF750F, the new VFR750F featured greatly improved power output (105 hp up from 83 hp), lighter weight (claimed 20 kg), a lower center of gravity, a wider front tire, a slightly shorter wheelbase (15mm) gear driven cams and 6 rather than 5 gears. The VFR750F received many positive reviews and awards while in production, including winning the Best 750 cc sport bike award from Cycle World six years in a row. "Tariff beater" 700 cc versions (VFR700F) of the first-generation bike were available alongside 750 cc versions in the US market, due to the tax laws in place at the time that penalized large-displacement imported motorcycles (in...
