Educational Assessment in a Time of Reform provides background information on large-scale examination systems more generally and the South African examination specifically. It traces the reforms in the education system of South Africa since 1994 and provides a description of the advances in modern test theory that could be considered for future standard setting endeavours. At the heart of the book is the debate on whether the current standard of education in Africa is good enough . If not, then how can it be improved? The aim of this book is to provide a

point of departure for discussions on standard-setting, quality assurance, equating of examinations and assessment approaches. From this point of departure recommendations for practices in general and the exit-level (Grade 12) examination results in particular can be made. This book is ideal reading for principals, teachers, academics and researchers in the fields of educational assessment, measurement, and evaluation.

Americas to Africa, Asia, and the Indian subcontinent. Their common theme is the need to share meaningful and beautiful mathematics with disenfranchised communities across the globe. Through these stories, the authors share their educational philosophy, personal experiences, and student outcomes. They incorporate anecdotal vignettes since research articles in mathematics education often exclude them. The inclusion of these stories is an element that adds immeasurable value to the larger narratives they tell.

Since 2001, the International Association for the Evaluation of Educational Achievement (IEA) has been conducting, in cycles of five years, the Progress in International

Reading Literacy Study (PIRLS). The PIRLS program encompasses trend studies designed to monitor progress in reading achievement in an internationally comparative context. PIRLS 2001 and PIRLS 2006 both assessed primary school students in their fourth year of schooling (Grade 4 in the majority of countries). Progress in Reading Literacy in National and International Context is the second book to explore the influence of findings from the PIRLS surveys on different education systems. It presents a compilation of insights from 12 of the 35 countries that participated in PIRLS 2006. These insights relate to the impact of PIRLS on the systemic, governmental, administrative, and school-level aspects of the education systems featured and exemplify how PIRLS

has influenced research initiatives, policy development, and national capacity-building. The primary aim of this book and its predecessor (Progress in Reading Literacy: The Impact of PIRLS 2001 in 13 Countries, edited by Knut Schwippert and published in 2007) has been to explore the opportunities that PIRLS ' findings hold for the development of education systems. Five of the 12 countries participating in the current impact of PIRLS project contributed to the 2001 project. For these countries, the current book provided opportunity to view, from a longitudinal perspective, the transformative processes initiated in response to the findings of both surveys. The book thus provides in-depth information on the various aspects of the national education

systems represented herein that have originated, been restructured, or otherwise been modified as a direct or an indirect consequence of the results of the 2001 and 2006 PIRLS surveys. The book also gives a brief overview of the design, implementation, and main international findings of PIRLS 2001 and 2006. These introductory chapters are followed by country chapters, each of which is written by authors with unique insider perspectives gained from their work in their home institutions within their national contexts. Findings from these chapters are assembled in a comparative summary.

This dissertation is composed of three essays. Essay 1, "Does School Start Too Early For Student Learning?", considers the connection between school start time and student performance. Biological evidence indicates that adolescents' internal clocks are designed to make them fall asleep and wake up at later times

# Where To Download Mathematical Literacy

than adults. This science has prompted widespread debate about delaying school start times in the U.S., a country which has some of the earliest start times worldwide. The debate suffers, however, from a glaring absence of evidence: the small number of prior studies has been too low powered statistically to test whether later start times improve achievement. I fill the gap by studying achievement across a large, nationally representative set of high schools that have varying start times. I identify the positive effect of later clock start times, as well as the independent effect of greater daylight at school start time. My primary empirical method is cross-sectional regression with rich controls for potentially confounding variables. The findings are confirmed by

# Where To Download Mathematical Literacy

regression discontinuity analysis focused on schools close to time zone boundaries. I quantify the net gain in welfare from having an additional hour of sunlight before school starts by comparing the substantial lifetime earnings benefits for students against the likely the societal costs. Essay 2, "Student Success and Teaching Assistant Effectiveness In Large Classes", considers the impact teaching assistants (TAs) have on student performance. In universities, TAs play a crucial role by providing small group instruction in lecture courses with large enrollment. The multiplicity of TAs creates both positive opportunities and negative incentives. On the one hand, some TAs may excel at tasks--such as helping struggling students--at which other TAs fail. If so, all students may

# Where To Download Mathematical Literacy

be able to learn better if they can match themselves to the TA that best suits their needs. On the other hand, the multiplicity of TAs means that students in the same class often receive instruction that varies in quality even though they are ultimately graded on the same standard. In this paper, we use data from a large lecture course in which students are conditionally randomly assigned to TAs. In addition to administrative data on scores and grades, we use survey data (which we generated) on students' initial preparation, their study habits, and their interactions with TAs. We identify the existence of variation among TAs in teaching effectiveness. We also identify how TAs vary in their effectiveness with certain subpopulations of students: the least

# Where To Download Mathematical Literacy

and best prepared, students with different backgrounds, and so on. Using our parameter estimates, we simulate student achievement under scenarios such as random assignment to TAs, elimination/retraining of the least effective TAs, and matching of TAs to students based on initial information to show the potential gains in student welfare from more efficient matching. Essay 3, "A Study of Student Majors: A Historical Perspective", considers whether differing financial returns across degrees are a significant factor in a student's choice of a major. During the late 1990s, the U.S. experienced a technology boom that significantly increased the initial salary offers to engineering students, and computer science students in particular. These dramatic increases in returns provide

# Where To Download Mathematical Literacy

an excellent opportunity to examine not only how students respond to salary levels, but also to salary trends. The existing literature has focused on the extent to which differing financial returns can affect a student's choice of undergraduate major. This paper extends the analysis to test if trends in salary levels also affect the share of students selecting into various majors using a comprehensive dataset of all post-secondary institutions. I find that students select into majors that offer higher salaries and have greater wage growth. Using a flexible empirical
