Unit operations; processes in waste water treatment

Processing and assembly operations alter the geometry, properties, and/or appearance of the work unit. They add value to the product. The product must be moved from one operation to the next in the manufacturing sequence, and it must be inspected and/or tested to insure high quality.

Manufacturing Operations: Processing and Assembly Operations

As nouns the difference between process and operation is that process is a series of events to produce a result, especially as contrasted to product while operation is the method by which a device performs its function. As a verb process is to perform a particular process or process can be to walk in a procession.

Unit Operations and Processes in Environmental Engineering ...

In chemical engineering and related fields, a unit operation is a basic step in a process. Unit operations involve a physical change or chemical transformation such as separation, crystallization, evaporation, filtration, polymerization, isomerization, and other reactions. For example, in milk processing, homogenization, pasteurization, and packaging are each unit operations which are connected to create the overall process. A process may require many unit operations to obtain the desired product
