### **Conceptual Architecture**

Conceptual architecture is a form of architecture that utilizes conceptualism, characterized by an introduction of ideas or concepts from outside of architecture often as a means of expanding the discipline of architecture. This produces an essentially different kind of building than one produced by the widely held 'architect as a master-builder' model, in which craft and construction are the guiding principles.

In considering a conceptual architecture for information literacy, one that provides a basic design of sensitizing concepts for research and pedagogical development, a number of broad features must be taken into account. These features are introduced here, as context, which influences discourse and information modality.

## **Conceptual Architecture - an overview | ScienceDirect Topics**

Conceptual architecture is a structural design that contains no implementation details. For example, a diagram that shows entities and relationships between them might be used to plan the structure of user interfaces, software components or a data model. Logical architecture gives as much detail as possible without constraining the architecture to a particular technology

Creating and developing architectural concepts is something a lot of students and indeed many architects struggle with. This may be due to project pressures, writers block, limited inspiration, or just the fact that for many students their architecture schools particularly in the first couple of years, don't teach and stress the importance of them. As we discuss here in "How to develop an architecture concept", the best conceptual approaches should always aim to provide the backbone ...
