Get power and performance with intensely fast RC Jets and RC Ducted fan planes at Graves RC Hobbies!

RC Ducted Fans and RC Jets Remote Controlled Hobby

Arguably the cutting edge of foam electric aircraft, RC jet airplanes powered by electric ducted fans (EDFs) provide exciting performance and impressive scale fidelity. These detailed model jet aircraft require a larger flying area due to their size, with some models reaching speeds above 110 mph! Larger RC EDF jets require larger airspace and longer distance for take-offs and landings, prefer smooth surface runways, and are designed specifically for intermediate to advanced flyers.

BVM Jets was started in 1981 when BV was still a pilot at Eastern Airlines. Starting with his Sport Shark ducted fan model, he traveled the country going to events to show off his product capabilities. He followed his original models with his iconic Viper, Aggressor, and the scale F86. All of which became industry standard-bearers.

A ducted fan is an air moving arrangement whereby a mechanical fan, which is a type of propeller, is mounted within a cylindrical shroud or duct. The duct reduces losses in thrust from the tips of the propeller blades, and varying the cross-section of the duct allows the designer to advantageously affect the velocity and pressure of the airflow according to Bernoulli's principle. Ducted fan propulsion is used in aircraft, airships, hovercraft, and fan packs. A jet fan is a stationary ducted fan
