application at doses that usually give effective control of the species.

Herbicide Resistance | Weed Science Society of America

Just like people, weeds have natural genetic variations. And it's those variations that allow some weeds to survive even though they've been sprayed with an herbicide..

Resistance In
Weeds And Crop

An herbicide has a specific site (target site of action) where it acts to disrupt a particular plant process or function (mode of action). If this target site is somewhat altered, the herbicide no longer binds to the site of action and is unable to exert its phytotoxic effect. This is the most common mechanism of herbicide resistance.
