A model is a picture of what something is or of how it works that is simplified when compared to reality. In a good model that simplification is an advantage because it can reveal the basic structure or mechanism of what is going on and thereby give us a deeper

Discuss how those models differ from each other, and what you should do to determine which model is more appropriate as an explanation of the observed behavior.

Solution This exercise can generate a number of different mathematical models. For example, Eqs. (2.1) and (2.2) are two competing models for the observation seen in
