### Kawasaki Mower Engine Governor Arm

In general most governors are adjusted by moving your throttle control to full speed and notice what direction your governor arm moves. Then you loosen the governor arm to shaft bolt and turn the governor "shaft" the SAME direction (as far as it will go) as the governor arm moved when in full throttle. Tighten the arm to shaft. When you wick up the engine, you should see the arm controlling the speed. If you don't, you might have an internal problem.

### Kawasaki - Lawn Mower Engines - Small Engines

The lawnmower governor is designed to maintain the engine speed set by the throttle lever, regardless of the load imposed. When the engine slows down while cutting through thick grass, the governor opens the throttle automatically, thus maintaining the preset engine speed. Conversely, when the mower clears the load, the governor compensates by closing the throttle sufficiently to prevent the engine from racing.

### How to Set a Governor Lever on a Lawn Mower | eHow

First The governor shaft should always be turned in the same direction the governor arm turns to open the throttle wide open. For example, on Tecumseh TVS, LEV, TVM, TVXL and other similar engines, the governor arm rocks in the counter clockwise direction to close the throttle to idle.
