Windows for Workgroups 3.11 adds a 386-protected mode networking stack. It includes support for NetBUI and IPX protocols, numerous network cards, a client for accessing remote printers and files shares, and a print and file server. TCP/IP is available as a separate add-on.

WinWorld: Windows 3.0 / 3.1 for Workgroups 3.11

Microsoft Windows workgroups organize PCs as peer-to-peer local networks that facilitate easier sharing of files, internet access, printers, and other local network resources. Each computer that's a member of the group can access the same resources being shared by the others, and in turn, can share its own resources if configured to do so.

Using Workgroups in Computer Networking

Computers that belong to a domain can also be configured to run Message Queuing in workgroup mode by installing Message Queuing in workgroup mode, and then adding the AlwaysWithoutDS registry entry (a DWORD) under the HKLM\SOFTWARE\Microsoft\MSMQ\Parameters\Setup registry key with a value of 1. When operating in workgroup mode, applications are limited to the following functionality.

Workgroup Support | Microsoft Docs

In a Windows network, a domain is a group of server computers that share a common user account database. A user at a client computer can log in to a domain to access shared resources for any server in the domain. Each domain must have at least one server computer designated as the domain controller, which is ultimately in charge of the domain.
