In a typical geology laboratory course, we don't break mineral samples with a hammer. Rather, we observe mineral samples that have already been broken from larger fragments, and we simply observe these smaller broken samples for evidence of cleavage surfaces. If present, we count the number of any different cleavage directions, and eyeball estimate the angle between any two cleavage planes.

Mineral Study Guide - Cleavage

When a property appears to be well-developed, look back and forth between the mineral sample and reference illustrations (e.g., cleavage) to make visual comparisons. Repetitive practice will help you to integrate information, and you will develop an increasing familiarity that speeds your study.
