Instrument engineer CV - SlideShare

Instrumentation is used to monitor and control the process plant in the oil, gas and petrochemical industries. Instrumentation comprises sensor elements, signal transmitters, controllers, indicators and alarms, actuated valves, logic circuits and operator interfaces. An outline of key instrumentation is shown on Process Flow Diagrams which indicate the principal equipment and the flow of fluids in the plant. Piping and Instrumentation Diagrams provide details of all the equipment, piping and ins

Instrumentation in petrochemical industries - Wikipedia

Process instrumentation in Oil and Gas. Process instrumentation is an integral part of any process industry because it allows real time measurement and control of process variables such as levels, flow, pressure, temperature, pH and humidity. With the right instrumentation, process plants can run effectively, efficiently, economically and safely through the integration of alarm signals.
