Abstract: The discussion of design experiments has largely ignored the Vygotskian tradition of formative interventions based on the principle of double stimulation. This tradition offers a radical approach to learning research which focuses on the agency of the learners.

Enter formative assessment. Unlike assessments given at the end of a unit, formative assessments are quick checks for understanding that give teachers valuable insight into the minds of their students. The key to a good formative assessment is that it is quick and easy, especially in the science classroom.
