Fig 1.1: Stages of Remote Sensing. History of Remote Sensing The knowledge about the history of Remote Sensing is necessary for better understanding of the subject and its scope, and also for future development, particularly for the welfare of human society. The development of remote sensing over time can be broadly divided into following six phases.

Remote Sensing and Geographical Information System (GIS)

A geographic information system is an important and useful tool in the hydrology sector. It helps to study as well as manage water resources on earth. Water resources have great demand hence need knowledgeable disposition. In addition to that, GIS is useful for practical since water occurs temporally and spatially through the hydrologic cycle.
