Java Servlet is the foundation technology for Java server-side programming. You need to understand Servlet thoroughly before you could proceed to other Java server-side technologies such as JavaServer Pages (JSP) and JavaServer Faces (JSF). 2.

### Java Server-Side Programming - NTU

The Dynamic Websites – Server-side programming topic is a series of modules that show how to create dynamic websites; websites that deliver customised information in response to HTTP requests. The modules provide a general introduction to server-side programming, along with specific beginner-level guides on how to use the Django (Python) and Express (Node.js/JavaScript) web frameworks to create basic applications.

of raw sockets; could further overload server Basic CGI Programming Can create a form using HTML Eventually form is submitted to a server-side CGI program CGI program processes form arguments, and generates a response, often as HTML that can rendered. CGI program runs on the server. Can be written in any language; popular

### Server-Side Programming

Server-side code can be written in any number of programming languages — examples of popular server-side web languages include PHP, Python, Ruby, C#, and NodeJS (JavaScript). The server-side code has full access to the server operating system and the developer can choose what programming language (and specific version) they wish to use.

### Introduction to the server side - Learn web development | MDN

Use server-side programming to develop data logic that resides in the database. An application can explicitly invoke stored subprograms (procedures and functions), written in PL/SQL (pronounced P L sequel) or Java. You can also create a trigger, which is named program unit that is stored in the database and invoked in response to a specified event.

### Server-Side Programming: PL/SQL and Java

Why Server Side Programming? Though it is technically feasible to implement almost any business logic using client side programs, logically or functionally it carries no ground when it comes to enterprise applications (e.g. banking, air ticketing, e-shopping etc.). To further explain, going by the client side programming logic; a bank having ...

### Introduction to Server Side Programming

Abstract — In the presence of so many scripting languages or technologies available for server-side processing, it is usually a difficult decision for a beginner which technology to learn or use for development. In this paper, we have presented four leading server-side scripting technologies –PHP, Django, Ruby on Rails, and Node.js.We

### A Comparison of Server Side ScriptingTechnologies

Server-side scripting is a technique used in web development which involves employing scripts on a web server which produce a response customised for each user's (client's) request to the website. The alternative is for the web server itself to deliver a static web page.
