the system. The control or control function is an operation that controls the recording, processing, or transmission of data. These two functions drive how the system works and how the desired control is found. With these definitions, a basic optimal control problem can be defined. is a branch of mathematical optimization that deals with finding a control for a dynamical system over a period of time such that an objective function is optimized. It has numerous applications in both science and engineering. For example, the dynamical system might be a spacecraft with controls corresponding to
