TFSI®: Direct Injection - Turbocharged Engine | Audi USA A radical shift from convention, Audi TFSI combines direct injection with forced induction supercharging or turbocharging. This unleashes higher power output with greater fuel efficiency and produces outstanding responsiveness—making the engine more of an extension of the driver.

**TFSI®: Direct Injection - Turbocharged Engine | Audi USA**  
The TFSI (Turbo fuel stratified injection) is the world's first turbocharged direct injection engine. This system produces higher power output and optimum engine response, all while providing greater fuel efficiency and reduced emissions. The TFSI engine is available in. 4-cylinder, 6-cylinder, and V-8 variations.

The TFSI (Turbo fuel stratified injection) is a trademark of the Volkswagen Group for a type of forced-aspiration ("turbo") engine where the fuel is pressure-injected straight into the combustion chamber in such a way as to create a stratified charge.

FSI/TFSI principle At Audi, FSI stands for gasoline direct injection, a technology in which fuel is injected directly into the combustion chambers, rather than into the intake manifold in the traditional manner. More favorable in terms of thermodynamics, this method improves the efficiency of the engine.

In TFSI engines, the high-pressure pump is driven by the camshaft. In EA113 engines, the camshaft has a cam in this place. The connection between the high pressure pump and the camshaft is made via a pump tappet.
