Books like touching a nerve are difficult to find. It touches on a hard-to-access topic, full of technical jargon and many sensitive issues and yet, manages to be surprisingly comprehensible, highly educative on a wide range of topics, respectful on delicate matters and all in all a very entertaining read. The main subject is the science of the brain and how the three-pound mass of jelly (as Ramachandran likes to put it) was engineered by evolution

Touch is the sense by which we determine the characteristics of objects: size, shape, and texture. Pain messages are picked up by receptors and transmitted to the spinal cord via small myelinated fibers and very small unmyelinated fibers. From the spinal cord, the impulses are carried to the brainstem, thalamus, and cerebral cortex and ultimately perceived as pain.
