Difference Between Compiler and Interpreter. A compiler is a translator which transforms source language (high-level language) into object language (machine language). In contrast with a compiler, an interpreter is a program which imitates the execution of programs written in a source language. Another difference between Compiler and interpreter is that Compiler converts the whole program in one go on the other hand Interpreter converts the program by taking a single line at a time.

Object-oriented languages are ubiquitous and the tools and compilers for a language are often written in the same language. A compiler reads in files in one language and translates them to files in another language. You can implement a compiler in any language, including the same language it compiles, a process called "self-hosting".
